

The 5 benefits of a
skin diagnosis with
the Observ:

100% safe and
harmless analysis
method*

The ability to

respond to real skin-
needs and prevent future
imperfections by using
the right products &
treatments

Discrete and

personal skin analysis
report (print-out
or email)

Keep track
of progress with
your skin care
professional

Start your
new skin health
plan directly

* The Observ skin analysis works on the principle of skin fluorescence. During the analysis your skin will be exposed to a very low dose of UV rays. An harmless and safe intensity which is just a fraction of the natural sun light which you experience outdoors.

If you want more information about the possibilities for skin analysis with the Observ, prices or skincare & treatments, please contact your skin care professional.

Professional skin analysis with the Observ

Did you know that almost 80% of the women don't have good and realistic knowledge of their skin type & condition?

Scientists discovered a long time ago, that our skin consists of multiple layers. The only layer we can see with the human eye, is the outer layer (*Epidermis*). Very often the deeper layers contain the keys to healthy skincare and the prevention of signs of aging.

The Observ is a diagnostic imaging device which visualizes your **total** skin condition **including** the underlying "invisible" layers, skin structures and patterns. The patented technology behind the Observ is based on the illumination and fluorescence of different kind of lights on facial skin. Within 30 minutes, you will have a clear understanding of your own skin condition and you will be provided with personal skin care routine for any needs that are identified.
